

LLM as a Service.io

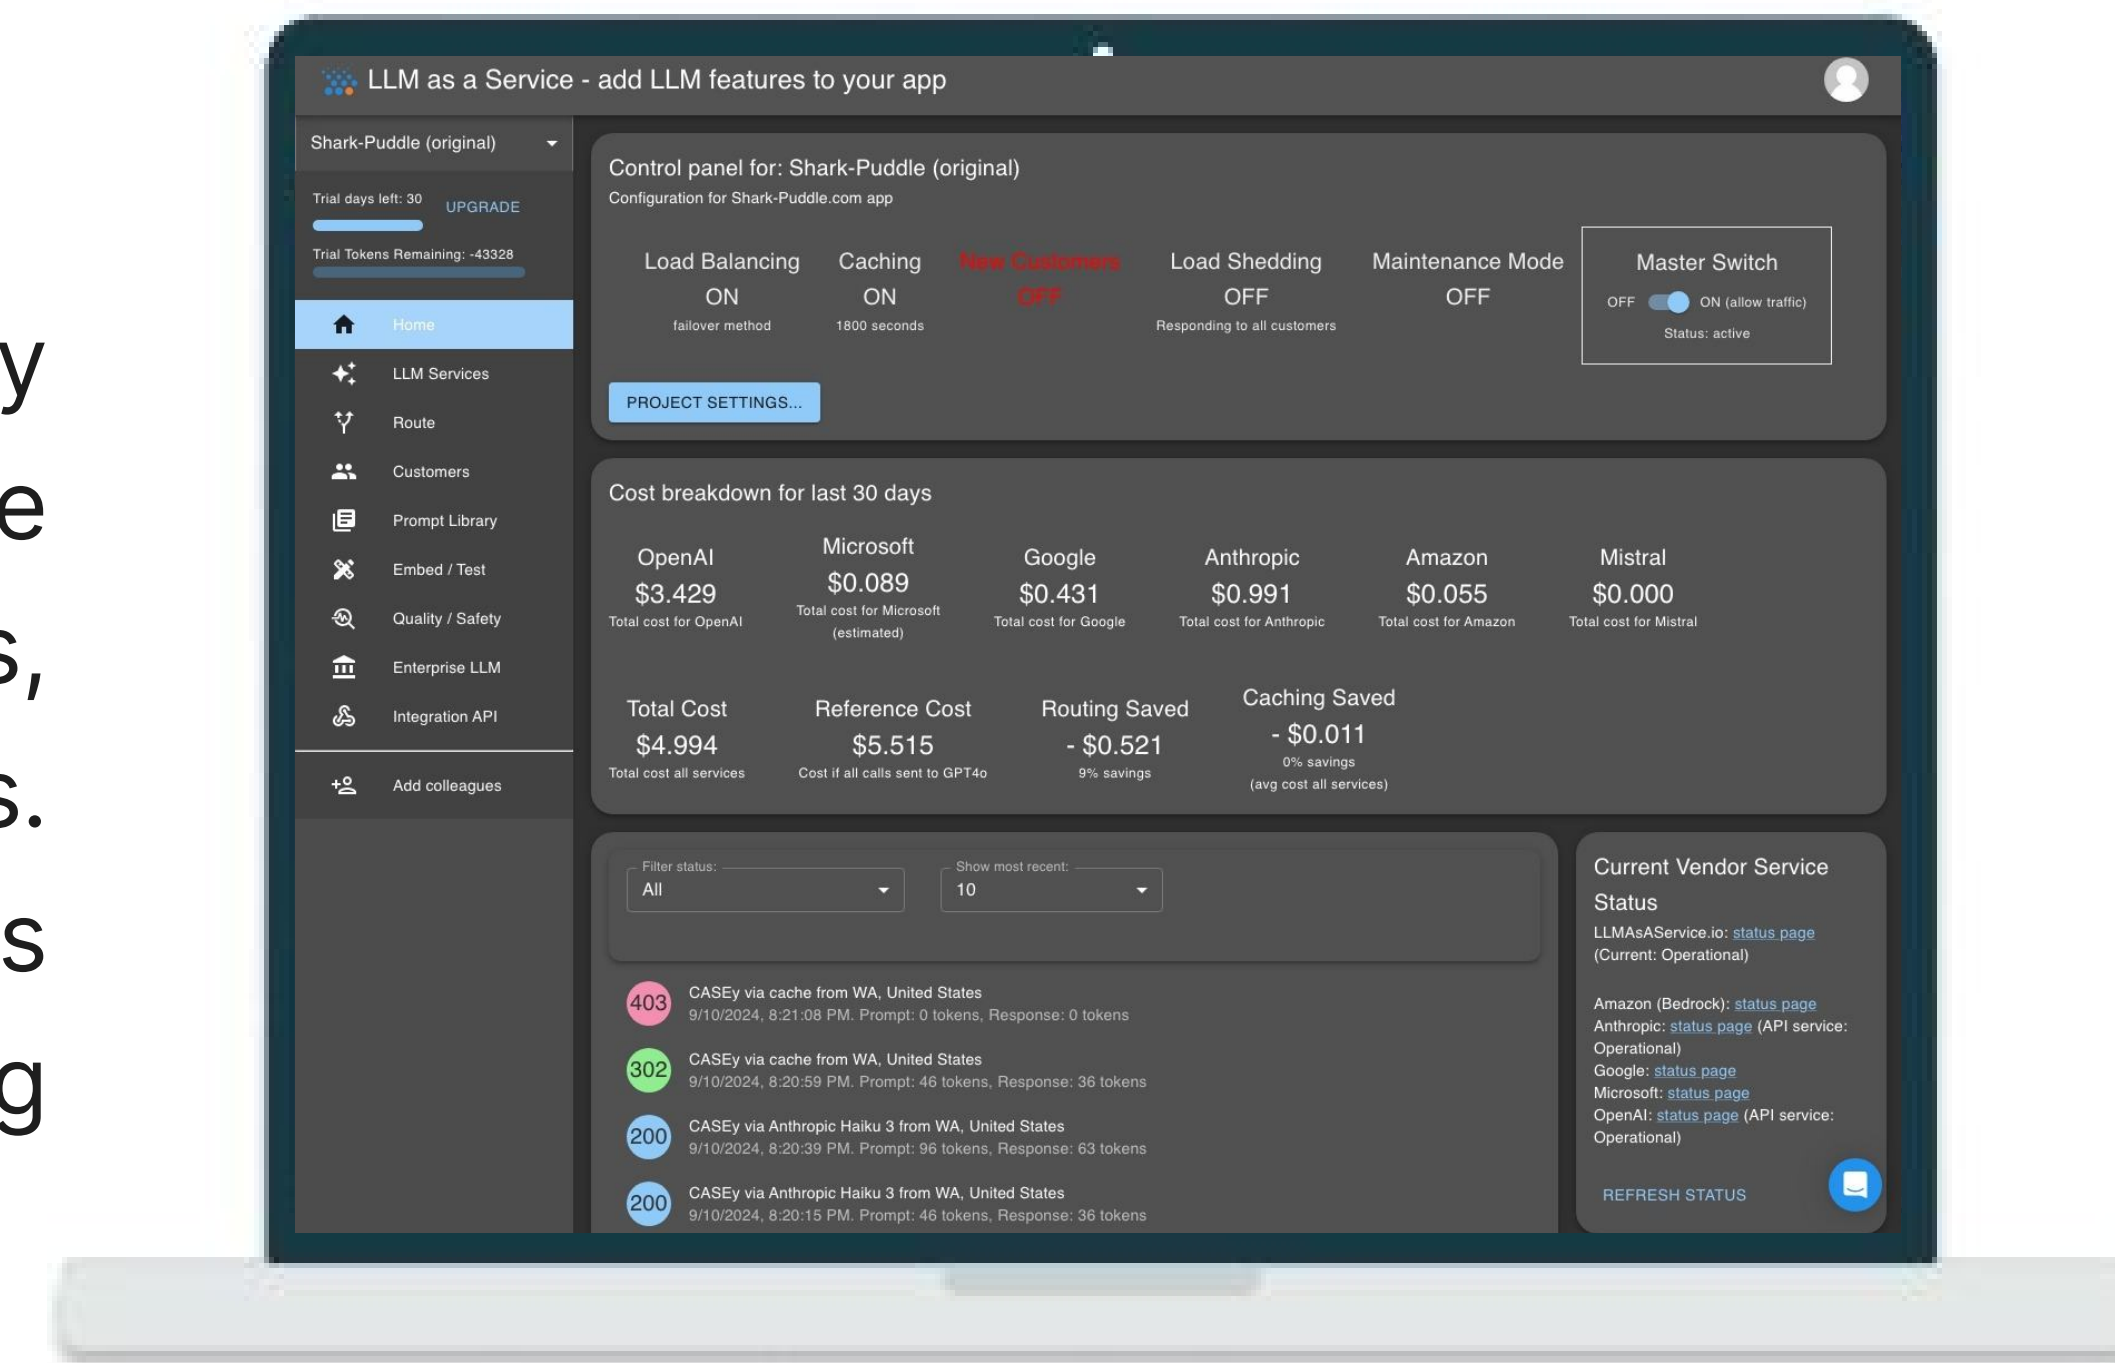

Reliable, Responsible, and Cost-Effective AI
for Applications and Enterprises

AI Infrastructure for Applications

With LLMasaService.io, you can quickly and confidently integrate advanced AI capabilities into your products, empowering your users with cutting-edge functionality. Our platform handles the underlying AI infrastructure, so you can focus on building innovative applications that leverage the power of LLMs.

Managed LLMs for Enterprises

LLMasaService.io's Managed LLM Gateway provides enterprises with an easy-to-use control panel, dynamic routing, policy guardrails, off-topic filters, and cost accounting features. This allows you to empower your employees with the superpowers of AI, while maintaining control over usage, costs, and compliance.

More info at llmaservice.io

AI Services Control Panel

Centralized operation of AI providers, easily configure and deploy new models

Responsible AI, Security & Compliance

Ensure prompt/response safety, policy enforcement, and consistent brand voice

Cost Efficiency & Customer Management

Dynamic routing and caching, w/ customer token budgeting and tracking.

Managed Enterprise AI for Staff

Managed access to multiple AI providers within guardrails, w/ cost accounting.

Benefits of LLMasaService.io:

1

Operate Multiple LLMs and Providers with Ease

- Automatic failover between multiple AI providers ensures uninterrupted service.
- Intelligent routing to faster/cheaper/specialized models
- Easily configure, test, and onboard new models/providers

2

Restrict Confidential And Sensitive Information

- PII and Sensitive Information can be blocked and redacted before being sent to any LLM vendor.
- Eliminate toxic and unsafe prompts and responses.
- Full call logging and auditing of prompts and responses

3

Ensure Cost Efficiency and Allocation

- Reduce costs by sending simple prompts to faster, cheaper models and caching repeated requests.
- Allocate costs to customers/departments
- Avoid vendor lock-in and easily bring new models online

4

Deploy Quality AI features with Confidence

- Unified developer API for LLM interactions
- Streaming, Multi-Turn conversations and UI Components
- Easily update prompts and model routing w/o code changes

Target Market

Application Developers

- Add AI features to SaaS, mobile, or web applications without heavy infrastructure investment.
- All applications will eventually include AI features - they can code their own infrastructure or use ours.

Enterprises

- Allow staff managed access to AI for day-to-day use and building into internal applications
- All enterprises will have to govern internal use of AI, and our solution controls cost & avoids vendor lock-in

The Team

Chris Hefley (chris@llmaservice.io)

- cofounder-CEO of LeanKit, acquired by Thoma Bravo in 2017

Troy Magennis (troy@llmaservice.io)

- Agile product development and forecasting/metrics expert
- focusedobjective.com

Troy and Chris also collaborated on LeanKit from 2012-2017
